⚙️ How Our Random Headcanon Generator Works

Our random headcanon generator uses algorithmic chaos and combinatorial creativity to generate unexpected fan theories. Here's how it works:

The Randomization Algorithm

1. **Element Selection:** Randomly selects characters, fandoms, concepts, and themes from extensive databases
2. **Combinatorial Logic:** Uses algorithms to combine these elements in unexpected but grammatically coherent ways
3. **Chaos Integration:** Incorporates a chaos factor that determines how absurd or unexpected combinations become
4. **Template Application:** Applies narrative templates that structure the random elements into coherent headcanons
5. **Weirdness Calibration:** Adjusts the output based on user-controlled weirdness and chaos settings
6. **Quality Filtering:** Ensures generated headcanons are at least grammatically coherent, no matter how absurd
